

11/29/21 Lecture Notes Section 16.7
Surface Integrals

Last Time:
$$\iint_S f(x, y, z) dS = \iint_D f(x(u, v), y(u, v), z(u, v)) |\vec{S}_u \times \vec{S}_v| dA$$

where $\vec{S}(u, v)$ parameterizes the surface S on domain D

Ex: Compute $\iint_S x^2 dS$ for S the surface

of the unit sphere centered at the origin

$$\vec{S}(\theta, \phi) = \langle \sin(\phi)\cos(\theta), \sin(\phi)\sin(\theta), \cos(\phi) \rangle$$

 $(\theta, \phi) \in [0, 2\pi] \times [0, \pi]$

spherical
coords
of unit
sphere

$$\vec{S}_\theta = \langle -\sin(\phi)\sin(\theta), \sin(\phi)\cos(\theta), 0 \rangle$$

$$\vec{S}_\phi = \langle \cos(\phi)\cos(\theta), \cos(\phi)\sin(\theta), -\sin(\phi) \rangle$$

$$\vec{S}_\theta \times \vec{S}_\phi = \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ -\sin(\phi)\sin(\theta) & \sin(\phi)\cos(\theta) & 0 \\ \cos(\phi)\cos(\theta) & \cos(\phi)\sin(\theta) & -\sin(\phi) \end{vmatrix}$$

$$= \langle -\sin^2(\phi)\cos(\theta), -(\sin^2(\phi)\sin(\theta), -\sin(\theta)\cos(\theta)\sin^2(\phi) - \sin(\phi)\cos(\phi)\cos^2(\theta)) \rangle$$

$$= \sin(\phi) \langle \sin(\phi)\cos(\theta), \sin(\phi)\sin(\theta), \cos(\phi) \rangle$$

$$|\vec{r}_\theta \times \vec{r}_\phi| = \sin \phi \sqrt{\sin^2(\phi) \cos^2(\theta) + \sin^2(\phi) \sin^2(\theta) + \cos^2(\phi)} \\ = \sin \phi \cdot 1$$

$$\iint_S x^2 = \int_{\theta=0}^{2\pi} \int_{\phi=0}^{\pi} \sin^2(\theta) \cos^2(\theta) \sin(\phi) d\phi d\theta$$

$$= \int_{\theta=0}^{2\pi} \cos^2(\theta) d\theta \cdot \int_{\phi=0}^{\pi} \sin^3(\phi) d\phi \quad \text{Fubini}$$

$$= \frac{1}{2} \int_{\theta=0}^{2\pi} (1 + \cos(2\theta)) d\theta \cdot \int_{\phi=0}^{\pi} \sin \phi (1 - \cos^2(\phi)) d\phi$$

$$= \frac{1}{2} \left[\theta + \frac{1}{2} \sin(2\theta) \right]_{\theta=0}^{2\pi} \int_{\phi=0}^{\pi} -(1 - u^2) du$$

$$= \frac{1}{2} (2\pi - 0) \cdot \left(-\left[u - \frac{1}{3} u^3 \right]_{\phi=0}^{\pi} \right)$$

$$\pi \cdot \left(-\left(\pi - \frac{1}{3} \pi^3 \right) - \left(0 - \frac{1}{3} 0 \right) \right) = \frac{4\pi}{3}$$

$$u = \cos \phi \\ du = -\sin \phi d\phi$$

Want A theory of surface integrals of vector fields... First need to understand what "orientation" means for surfaces...

think back to line integrals:

(changing orientation neglects integrals)

Orientation \approx choice of direction...
RHR

Orientation should be controlled by the normal vector of the tangent plane to the surface at a given point

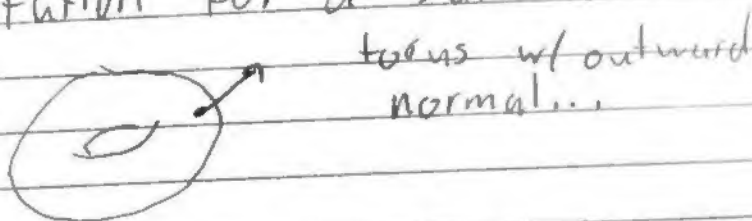

Positive orientation determined by right hand rule...

for $\sum \mathbf{x} \cdot \mathbf{S}_v$ should point "out" or "up" for positive orientation

Ex:  pointing outward = positive orientation

 pointing inward = negative orientation.

Can we always choose a consistent orientation for a surface

Möbius Band or Moebius Band \rightarrow cylinder w/ half twist

(click on link in website)

Surface is non orientable \rightarrow no consistent choice of normal

vid "Möbius strip"

NB! Our Surface integral from now on will assume an orientable surface...

i.e. $\vec{n}(u,v) = \frac{\vec{S}_u \times \vec{S}_v}{|\vec{S}_u \times \vec{S}_v|}$ for parameterization

$\vec{S}(u,v)$ is consistent...

↳ E.g. the Möbius band is excluded!

Defⁿ: Given a vector field \vec{V} on \mathbb{R}^3 and an orientable surface S w/ parameterization $\vec{S}(u,v)$, the flux of \vec{V} across S is

$$\iint_S \vec{V} \cdot d\vec{S} = \iint_S \vec{V} \cdot \vec{n}(u,v) dS$$

$$= \iint_S \vec{V} \cdot \frac{\vec{S}_u \times \vec{S}_v}{|\vec{S}_u \times \vec{S}_v|} dS = \iint_D \vec{V} \cdot (\vec{S}_u \times \vec{S}_v) dA.$$

Example: Compute flux of $\vec{v} = \langle z, y, x \rangle$ across the unit sphere centered @ the origin.

* If no orientation is given, assume the "counter-clockwise from above" or "outward" orientation.

Sol: From earlier, S is parameterized by

$$\vec{r}(\theta, \varphi) = \langle \sin(\varphi)\cos(\theta), \sin(\varphi)\sin(\theta), \cos(\varphi) \rangle$$

on $(\theta, \varphi) \in [0, 2\pi] \times [0, \pi]$ and has

$$\vec{r}_\theta \times \vec{r}_\varphi = -\sin \varphi \langle \sin(\varphi)\cos(\theta), \sin(\varphi)\sin(\theta), \cos(\varphi) \rangle$$

Q: is that the outward normal?

A: check the "east pole" $(1, 0, 0)$

$$(\theta, \varphi) = (0, \frac{\pi}{2})$$

$$(\vec{r}_\theta \times \vec{r}_\varphi)(0, \frac{\pi}{2}) = -1 \langle 1, 0, 0 \rangle = \langle -1, 0, 0 \rangle$$

inward orientation

\therefore we must work w/ $-\vec{r}_\theta \times \vec{r}_\varphi$ instead

\therefore The flux of \vec{v} across S is

$$\iint_S \vec{v} \cdot d\vec{s} = \iint_D \vec{v}(u,v) \cdot (-S_u \times S_v) dA$$

$$= \iint_D \langle \cos(\varphi), \sin(\varphi) \sin(\theta), \sin(\varphi) \cos(\theta) \rangle \cdot \sin(\theta) \langle -\sin(\varphi) \cos(\theta), \sin(\varphi) \sin(\theta), \cos(\varphi) \rangle dA$$

$$= \iint_D \sin(\varphi) (2\cos(\varphi) \sin(\varphi) \cos(\theta) + \sin^2(\varphi) \sin^2(\theta)) dA$$

$$= 2 \iint_D \cos(\varphi) \sin^2(\varphi) \cos(\theta) dA + \iint_D \sin^3(\varphi) \sin^2(\theta) dA$$

$$= 2 \int_{\varphi=0}^{\pi} \int_{\theta=0}^{2\pi} \cos(\varphi) \sin^2(\varphi) \cos(\theta) d\theta d\varphi$$

$$= 2 \int_{\varphi=0}^{\pi} \cos(\varphi) \sin^2(\varphi) [\sin \theta]_{\theta=0}^{2\pi} d\varphi$$

$$2 \int_{\varphi=0}^{\pi} 0 d\varphi = 0, \quad \int_{\varphi=0}^{\pi} \int_{\theta=0}^{2\pi} \sin^3(\varphi) \cdot \frac{1}{2} (1 - \cos(2\theta)) d\theta d\varphi$$

$$= \int_{\varphi=0}^{\pi} \frac{1}{2} \sin^3(\varphi) \left[\theta - \frac{1}{2} \sin(2\theta) \right]_{\theta=0}^{2\pi} d\varphi$$

$$= \int_{\varphi=0}^{\pi} \frac{1}{2} (2\pi - 0) \sin(\varphi) (1 - \cos^2(\varphi)) d\varphi \quad \begin{matrix} u = \cos(\varphi) \\ du = -\sin \varphi d\varphi \end{matrix}$$

$$= \pi \int_{u=1}^{-1} -1(-1-u^2) du = \pi \left[u - \frac{1}{3} u^3 \right]_{u=1}^{-1} \quad \begin{matrix} u(\pi) = -1 \\ u(0) = 1 \end{matrix}$$

$$= \boxed{\frac{4\pi}{3}} \Rightarrow 0 + \frac{4\pi}{3} = \boxed{\frac{4\pi}{3}}$$

Exercise: Compute $\iint_S \vec{v} \cdot d\vec{S}$ for

$\vec{v} = \langle y, x, z \rangle$ on the boundary of
the solid enclosed by the paraboloid
 $z = 1 - x^2 - y^2$ and the plane $z = 0$

1. check orientation of both bottom piece
will point downward.
